

I'm starting to shop for some type of battery monitoring device. Something that shows voltage, amp-hour usage, ect. I seen a couple meant for boats. But I'm hoping to get some advice as to what you've all had success with or not.

Thanks

Ryan Wenzlick

check link-10 or E-meter

Look into these maybe?

Luke, have you used those before. Looks like it would work nicely. Can the driver read the numbers on the meter (are they easy to read?) How is electric motor sport company - Have you ordered from them?

---

don't know, I just stumbled upon the website from a magazine we get called "electrifying times" I do recommend the journal but do not have experience with the monitors. We may however take a chance on them.

We are taking our first crack at Electrathon this year and in turn, trying to find our way. A question that my team has is where to order a battery monitor. The places we have tried will not accept purchase orders through our school. Ideas???

Try this place... [http://www.electricvehiclesusa.com/category\\_s/108.htm](http://www.electricvehiclesusa.com/category_s/108.htm)
