

Does anyone know if you can use the controller from an electric golf cart for the circuit? Will this work or not. If not anyone know where you can pick up used controllers?

A golf cart controller will work, just as long as it is rated for 24 volts and at least 175 amps. Just make sure you get the correct type of throttle input.

For rebuilt controllers, Curtis Instruments does sell rebuilds. You could also try a local forklift company if you have one near.

Found a rebuilt controller for you.

Last controller I bought from Curtis was \$180 without shipping.

You might have to call to get the exact specifications on the controllers. We've used both the 1204 and the 1205 controller. Programmability is nice, but not needed when first starting out.
