

My students and I would be more than happy to put on a new team workshop on a Saturday on this side of the state. Interested teams and their instructors could get as many of their questions answered in a one day workshop. Brakes, wiring, construction, design, sponsorship.... I have over 350 MB of information ranging from drawings to forms. Bring your flash drive!

Maybe we could get some of the experienced teams to do the same in their prospective part of the state?

Anyone interested?

Hi Jeremie,

Good idea! KEEP is able to offer a one graduate credit course for teachers (like we did last year at FVTC) if you think teachers would be interested. I actually have one teacher who called and is waiting for us to schedule something.

Instead of the one credit course, there could be separate one-day workshops in different areas of the state as you're suggesting. I think having the students involved is an excellent idea!

30 teachers have taken the one-credit Electrathon course in the last two years. A workshop focusing more on specifics might be better?

If we do want to schedule an actual course, we need to do it soon. One credit from UWSP requires 16 hours of face-to-face instruction, plus a final assignment.

I'm interested in hearing others thoughts. Thanks!

~Sara

I would recommend specific topics for the next workshop.

Steering geometry

Wiring/electrical principles

Welding??

Balance

Tires/rolling resistance

Just a thought.

Mike

Here is a site for EV information that new and experienced teams might like to review.

Hey everyone,

Just wanted to give you all an update on the workshop/course that was offered at Fox Valley Technical College this past weekend, Dec. 14-15. Thirteen teachers attended to learn about the Wisconsin Electrathon and many of them will hopefully be participating in the 2008 events. We look forward to "seeing" them all in this discussion forum within the next month. Thank you to those who helped with the coordination of this opportunity.

~Sara

Thanks for the info

The site changed several students' minds about having a rear wheel drive vehicle

thanks again
